String Handling		<table border="1"> <tr> <td>Generate random number between two integers</td><td>RANDOM_INT(IntExp, IntExp)</td></tr> </table>		Generate random number between two integers	RANDOM_INT(IntExp, IntExp)	Subroutines										
Generate random number between two integers	RANDOM_INT(IntExp, IntExp)															
<table border="1"> <tr> <td>String Length</td><td>LEN(StringExp)</td></tr> <tr> <td>Position of a character</td><td>POSITION(StringExp, CharExp)</td></tr> <tr> <td>Concatenation</td><td>StringExp + StringExp</td></tr> </table>		String Length	LEN(StringExp)	Position of a character	POSITION(StringExp, CharExp)	Concatenation	StringExp + StringExp	<table border="1"> <tr> <td>Define a subroutine</td><td>SUBROUTINE Identifier(parameters) # some code to run ENDSUBROUTINE</td></tr> <tr> <td>Returning a value</td><td>SUBROUTINE Identifier(parameters) # some code to run RETURN Exp ENDSUBROUTINE</td></tr> <tr> <td>Calling a subroutine</td><td>Identifier(parameters)</td></tr> </table>	Define a subroutine	SUBROUTINE Identifier(parameters) # some code to run ENDSUBROUTINE	Returning a value	SUBROUTINE Identifier(parameters) # some code to run RETURN Exp ENDSUBROUTINE	Calling a subroutine	Identifier(parameters)		
String Length	LEN(StringExp)															
Position of a character	POSITION(StringExp, CharExp)															
Concatenation	StringExp + StringExp															
Define a subroutine	SUBROUTINE Identifier(parameters) # some code to run ENDSUBROUTINE															
Returning a value	SUBROUTINE Identifier(parameters) # some code to run RETURN Exp ENDSUBROUTINE															
Calling a subroutine	Identifier(parameters)															
Substrings are created by the first parameter that gives the start position, the second parameter gives the final position and the third parameter is the string itself...																
SUBSTRING(IntExp, IntExp, StringExp)
